Professional Summary

Backend Engineer specializing in building scalable, high-performance APIs and microservices using Java (Spring Boot) and Python (Flask). Proven track record delivering secure, production-ready systems in fast-paced fintech environments. Passionate about clean architecture, automation, and solving real-world problems through code.

Technical Skills

Languages: Java, Python, JavaScript

Frameworks: Spring Boot, Flask, Express.js, Node.js

Databases: MySQL, PostgreSQL, MongoDB

Tools: Docker, Git, GitHub, GitLab, Postman, Swagger

Practices: REST APIs, Microservices, CI/CD, Agile, Unit Testing, OOP, TDD

Other: JHipster, API Security (JWT, OAuth2)

Professional Experience

Remita Payment Services Ltd

Jan 2024 – Present

Backend Engineer

- Built and optimized RESTful APIs and scalable microservices using Java (Spring Boot), improving overall system performance by ~30%.
- Designed and deployed corporate onboarding workflows, reducing partner integration time by 40%.
- Engineered transaction processing and notification services handling 1,000+ daily operations, with secure key management and fault tolerance.
- Automated access control, monitoring, and alerting, cutting manual operational intervention by 25%.
- Collaborated within Agile cross-functional teams (10+ engineers) to deliver bi-weekly production releases in a high-availability fintech environment.

Freelance Software Engineer

Dec 2022 – Dec 2023

Independent Contractor

- Delivered production-ready applications including a Python-based encrypted mobile/backend system, a face recognition authentication solution, and full-stack Node.js platforms for transport and hospital management systems.
- Implemented and deployed machine learning solutions such as a lung cancer detection system and recommendation engines (friend and clothing), integrating trained models into scalable backend APIs.
- Designed and implemented a Java-based banking application (account creation, transfers, transaction history) to solidify core OOP and Java fundamentals.
- Developed and deployed microservice-based systems, applying concepts such as service separation, REST communication, and JWT-based authentication.
- Strengthened expertise in databases (MySQL, PostgreSQL), API documentation, and secure backend architecture through hands-on project work.

Pan-African Equipment Group

May 2022 – Nov 2022

IT Support & Networking Intern

- Diagnosed and resolved network and system failures, improving infrastructure uptime by 15%.
- Installed and configured PoE switches, routers, and wireless access points across enterprise environments.
- Applied Java and OOP principles to automate internal technical tasks during operational downtime.
- Supported high-availability environments, developing strong troubleshooting, documentation, and escalation skills.

Projects

Banking Platform Backend: Built backend using Spring Boot and MySQL with secure login, transaction handling, and role-based access.

Yoruba OCR System: Created OCR system for Yoruba using Python (OpenCV, Tesseract), achieving 85%+ character recognition accuracy.

Credit Card Fraud Detection: Developed ML model using Scikit-Learn with 94% precision on synthetic datasets.

Max Music Player: Designed a Python-based desktop music player with dynamic playlist support and custom UI.

Education

B.Sc. in Computer Science

Sep 2018 – Sep 2023

Redeemer's University

Relevant Courses: Data Structures, Algorithms, Software Engineering, Machine Learning

Certifications

Java Backend Developer – Udemy

REST API Development – Postman Academy

Spring Boot Microservices – Coursera
